

A language for what you *smell*.

A classifier, digital and print menus, labels, education, and creative studio. A report-to-asset workflow built around the fingerprint ID and proportional aroma band.

Flower Spectrum Suite

A functional portfolio demonstration exploring how a shared visual vocabulary can carry a product story across discovery, learning, and creative output.

AROMA PROFILES

6

CONNECTED TOOLS

1

SHARED SYSTEM

A consistent identity across *different kinds of work.*

A retail menu, a teaching sheet, and a social post serve different audiences. They still need to tell a coherent story.

DISCOVER

Retail experience

A buyer searches the local flower catalog by aroma and specific terpene concentration, compares fingerprints, and sends a shortlist to a print menu.

UNDERSTAND

Classifier + education

A farm uploads a PDF, CSV, or scanned terpene report and flower photo. Editable source rows, unit checks, total reconciliation, and human review precede classification.

EXPRESS

Labels + creative

The reviewed flower generates social posts, a chemovar sales card, and six-up labels with a clean preview. Every output carries the fingerprint and band.

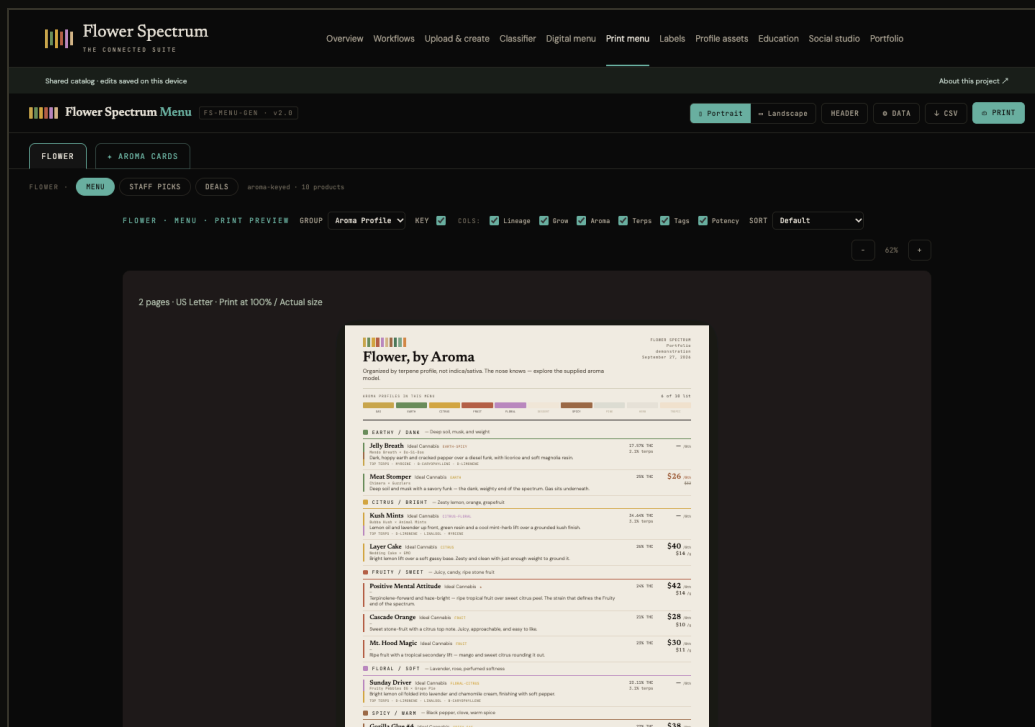

The integration decision

Preserve the original source and working behavior. Extract shared profile identities, sample panels, and classification math. Add a clear suite navigation, connected handoffs, local persistence, and a presentation layer that makes the system easy to explore.

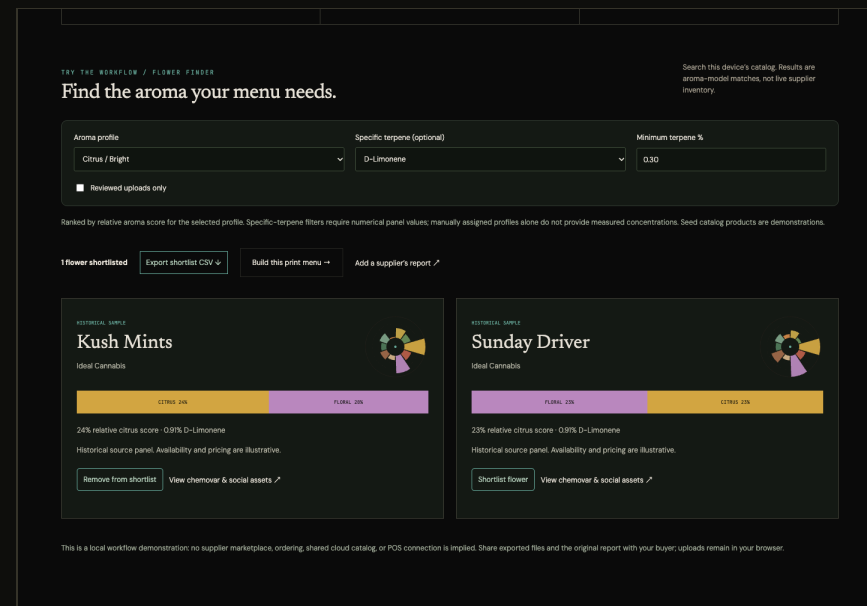

Sources: digital menu, education, social, classifier, print menu, labels; wholesale portal preserved as reference.

One source of identity.

Multiple useful expressions.

PRINT / Measured pages from the same catalog used by the digital menu.

BUY / Search aroma and terpene concentration, compare flower, shortlist, then print.

A farmer creates the identity; a buyer finds a menu fit; staff recognize the same flower on screen and on the shelf.

A project you can explore.

Assets you can share.

Interactive app

Unified navigation, reusable data modules, shared browser catalog, PDF labels, measured print pagination, and full-panel CSV backup.

Portfolio kit

Real interface screenshots, native social PNGs, ten profile cards and SVG fingerprints, this case study, an editable HTML version, print primer, and sharing copy.

Reviewable source

Seven intact supplied files, a checksum manifest, architecture and design notes, roadmap, tests, and public repository.

Evidence and boundaries

This is a portfolio demonstration, with illustrative commercial data and historical sample panels supplied in the prototypes. New reports are processed locally and require source review. Historical samples retain their original provenance; no independent scientific review is implied. Educational copy needs editorial review before retail use. No live POS connection, production access control, or measured business uplift is claimed.
