

A language for what you *smell*.

A connected retail menu, education library, and cultivator creative studio. Three prototypes brought together through one aroma system.

Flower Spectrum Suite

A functional portfolio demonstration exploring how a shared visual vocabulary can carry a product story across discovery, learning, and creative output.

AROMA PROFILES

3

CONNECTED TOOLS

1

SHARED SYSTEM

A consistent identity across *different kinds of work.*

A retail menu, a teaching sheet, and a social post serve different audiences. They still need to tell a coherent story.

DISCOVER

Retail experience

Five category views, aroma filters, product details, staff picks, contextual learning, and an operator catalog editor.

UNDERSTAND

Education library

Nine screen and print pieces, a terpene reference, and a preference quiz that hands the visitor into a matching menu view.

EXPRESS

Creative studio

Six editable social formats, visual fingerprints, and chemovar cards, all using the same profile names and colors.

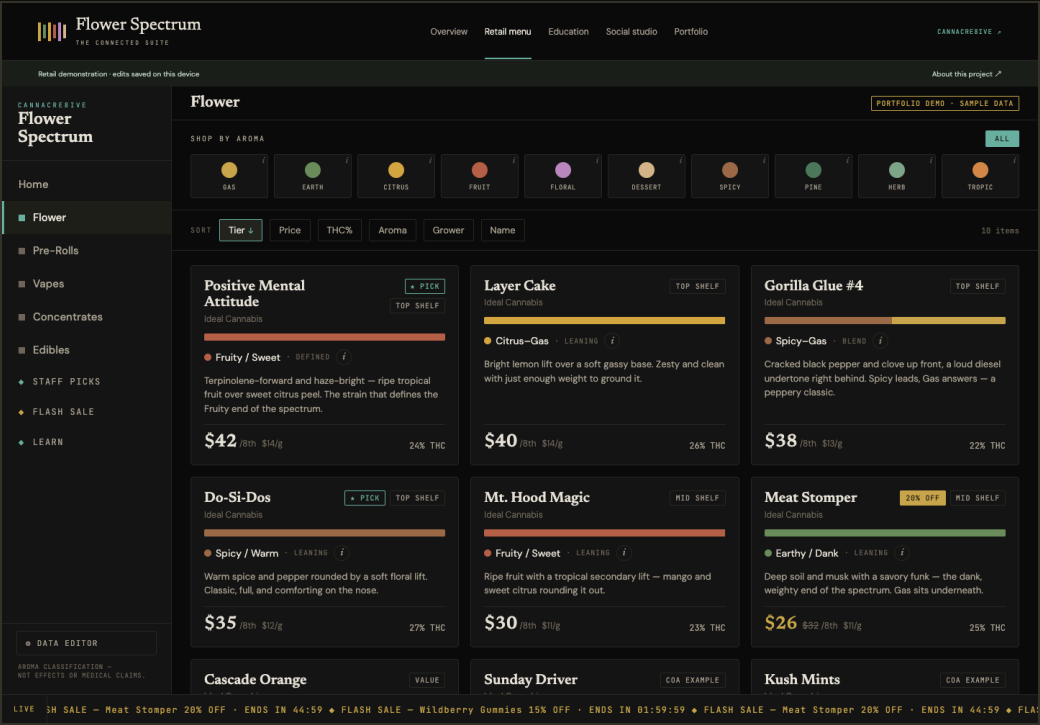

The integration decision

Preserve the original source and working behavior. Extract shared profile identities, sample panels, and classification math. Add a clear suite navigation, connected handoffs, local persistence, and a presentation layer that makes the system easy to explore.

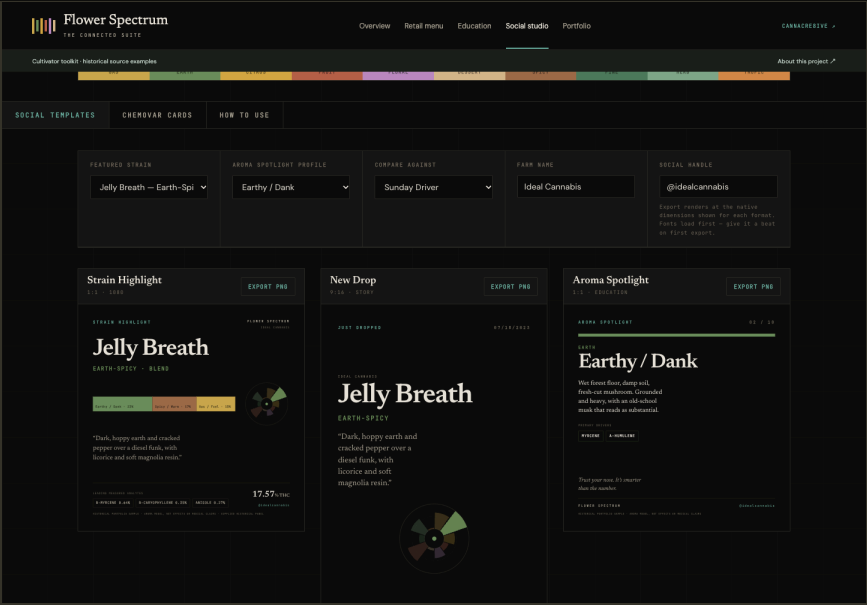

Source lineage: Tablet Menu v0.3 / Education Materials v1.1 / Cultivator Social Kit v1.0

One source of identity.

Multiple useful expressions.

RETAIL / Shared profile bands, category browsing, and a local data workflow.

CREATIVE / Native-size exports from the actual application.

Historical examples connect the menu and creative studio. The original education and social layouts remain editable in the project.

A project you can explore.

Assets you can share.

Interactive app

Unified navigation, reusable data modules, persistent browser catalog, CSV import/export, and source-preservation checks.

Portfolio kit

Real interface screenshots, native social PNGs, this four-page case study, an editable HTML version, print primer, and sharing copy.

Reviewable source

Three intact original files, a checksum manifest, architecture and design notes, roadmap, tests, and public repository.

Evidence and boundaries

This is a portfolio demonstration, with illustrative commercial data and historical sample panels supplied in the prototypes. Original lab PDFs and independent scientific review were not included. Educational copy needs editorial review before retail use. No live POS connection, production access control, or measured business uplift is claimed.
